

Amazon QuickSight

Fast, easy to use business analytics at 1/10th the cost of traditional BI solutions.

Amazon QuickSight is a fast, cloud-powered business analytics service that makes it easy to build visualizations, perform ad-hoc analysis, and quickly get business insights from your data.

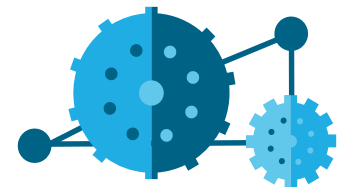

Choose your data source

You can upload flat files (CSV or Excel); ingest data from AWS data sources (Amazon Redshift, Athena, and others); connect to databases (SQL Server, MySQL, PostgreSQL, etc.) in the cloud or on-premises; or connect to SaaS applications like Salesforce.

SPICE – Super-fast, Parallel, In-memory, Calculation Engine

Built from the ground up for the cloud, QuickSight's Super-fast, Parallel, In-memory, Calculation Engine (SPICE) supports rich visualizations and scales to thousands of users who can all simultaneously perform fast interactive analysis.

Smart Visualizations

QuickSight comes with a built-in suggestion engine that provides you with recommended visualizations based on the properties of the underlying datasets, and as you drill into your data, QuickSight provides the most appropriate graph types using AutoGraph, a collection of algorithms that learn over time the best visualizations that match your analytical patterns.

Share and Collaborate

QuickSight allows you to easily share business insights by packaging them up as interactive stories that you can share with others. Using the Story feature in QuickSight, you can combine visualizations into business dashboards and share in a secure manner with individuals or groups in your organization.

CUSTOMER QUOTE

“There’s an increasing need to equip our business users with the ability to do their own ad-hoc data discovery and analytics to complement our centralized reporting. We are excited that Amazon QuickSight supports this self-service use case very well”

– Ajit Zadgaonkar, Head of Cloud Infrastructure at Edmunds.com
